Phone:	010	Consultation Time:	2026-05-16 02:51 PM

Consultation Parameters

Target Tooth ID:	17
Tooth Condition:	problem
Reported Symptoms:	Jaw/TMJ Issues

Final Clinical Findings & Diagnosis

Patient Information Summary:

Name: yazzed
Age: Not provided
Gender: Male

Clinical Examination Findings:

Tooth Condition: The following teeth were identified with issues during the examination: #17 (FDI notation) - problem, #28 - problem. The patient reported experiencing Jaw/TMJ Issues.

Observed Symptoms: Jaw/TMJ Issues.

Diagnosis:

Clinical Diagnosis:
- Dental Caries (Tooth Decay): FDI #17, #28
- Temporomandibular Disorder (TMD) due to reported Jaw/TMJ Issues

ICD/SNOMED codes:
- ICD-10: K02.9 (Dental caries without mention of tooth)
- SNOMED CT: 386457007 (Dental caries)
- ICD-10: M79.09 (Other temporomandibular disorders, unspecified)
- SNOMED CT: 277045007 (Temporomandibular disorder)

Treatment Plan:

Recommended Procedures in Order of Priority:
1. Restorative Dentistry: Fillings for FDI #17 and #28 to address dental caries.
2. Temporomandibular Disorder Management: Address the Jaw/TMJ Issues through physical therapy, medication, or further diagnostic tests as necessary.

****Urgency Level:****

High - Immediate attention is required for the TMD symptoms and the dental caries in teeth #17 and #28 to prevent further complications.

****Follow-up Recommendations:****

It is recommended that the patient returns for a follow-up appointment to assess the progress of treatment and address any remaining issues. The dentist may also suggest regular check-ups to maintain oral health.

Patient-Friendly Advice & Explanation

****Your Dental Checkup Results, Yazzed****

Hello Yazzed, here's a summary of your dental visit:

****What We Found:****

- Some issues with teeth #17 and #28. They have decay (cavities).
- You mentioned experiencing problems with your jaw/TMJ.

****What This Means:****

- The cavities need to be treated to prevent further damage to your teeth.
- Your jaw/TMJ issues may require physical therapy, medication, or more tests to help manage them.

****What We Recommend:****

1. We suggest fixing the cavities in teeth #17 and #28 with fillings.
2. For your jaw/TMJ problems, we'll work together on a plan that could include physical therapy, medication, or more tests if needed.

****What You Should Do At Home:****

- Brush and floss regularly to keep your teeth healthy.
- If you continue to experience jaw/TMJ issues, try to avoid chewing gum or hard foods, and apply warm compresses for relief.

****Next Steps:****

It's important that we see you again soon to check on the progress of your treatment and address any remaining issues. The dentist may also suggest regular check-ups to keep your smile bright!
