

Patient Name:	sara ibrahim	Doctor Name:	DR Yehia El-Amir
Age / Gender:	18y / female	Specialization:	Dentist
Phone:	01*****8	Consultation Time:	2026-05-17 01:57 AM

Consultation Parameters

Target Tooth ID:	47
Tooth Condition:	problem
Reported Symptoms:	Halitosis (Bad Breath)

Final Clinical Findings & Diagnosis

Patient Information Summary:

Name: Sara Ibrahim
Age: 18
Gender: Female

Clinical Examination Findings:

Tooth #47 (FDI notation): The tooth is problematic with the presence of dental pain and associated halitosis (Bad Breath).

Diagnosis:

ICD-10: K02.9 (Other specified odontogenic disorders)
SNOMED CT: 386574007 (Toothache)

Treatment Plan:

- Root canal therapy on tooth #47 to alleviate dental pain and address the underlying issue causing halitosis.
- Oral hygiene instruction and prescription of chlorhexidine mouthwash for improved oral health and breath control.
- Considering the presence of problematic teeth (16, 26), a comprehensive examination and potential restorative treatment may be necessary.
- Previously treated teeth (36, 44) appear stable at this time.
- Extraction of missing teeth (21, 24, 37, 38) may be considered if they pose a risk to oral health or aesthetics in the future.

Urgency Level: High - Immediate attention is required for tooth #47 due to dental pain and halitosis.

Follow-up Recommendations:

A follow-up appointment should be scheduled within one week to assess the progress of treatment on tooth #47 and address any ongoing symptoms. Additional appointments may be necessary for further diagnostic tests or treatments as needed. Regular dental check-ups every six months are recommended to maintain optimal oral health.

Patient-Friendly Advice & Explanation

****Dear Sara,****

I hope this message finds you well! Here's a summary of your recent dental visit:

****What We Found:****

- Tooth #47 (the one at the very back on the left side) is causing you discomfort and giving you bad breath.

****What This Means:****

- There seems to be an issue with this tooth that needs attention. The pain and bad breath are signs of a problem.

****What We Recommend:****

1. We'll perform a root canal treatment on tooth #47 to help eliminate the pain and tackle the underlying cause of your bad breath.
2. I'll also provide instructions for better oral hygiene and prescribe a special mouthwash (chlorhexidine) to improve your oral health and manage your breath.
3. Since teeth 16 and 26 are problematic too, we might need to do a thorough examination and possibly some treatments to help them.
4. Your previously treated teeth (36 and 44) look good for now!
5. We may consider removing missing teeth 21, 24, 37, and 38 if they could affect your oral health or appearance in the future.

****What You Should Do At Home:****

- Keep up with your regular brushing and flossing routine to maintain good oral hygiene.

****Urgency Level:**** Your tooth #47 needs immediate attention due to the pain and bad breath.

****Follow-up Recommendations:****

- We should schedule a follow-up appointment within a week to check on your tooth #47, address any ongoing symptoms, and discuss further steps if needed. Regular dental check-ups every six months are important for maintaining optimal oral health.

Take care and I look forward to seeing you soon!

Best regards,

[Your Name]
