

Patient Name:	Jana Ahmed	Doctor Name:	DR Yehia El-Amir
Age / Gender:	77y / Female	Specialization:	Dentist
Phone / Blood Type:	012369852017 (Blood: Unknown)	Consultation Time:	2026-05-18 06:35 AM

Consultation Parameters

Target Tooth ID:	47
Tooth Condition:	problem
Reported Symptoms:	Cold Sensitivity, Hot Sensitivity

Final Clinical Findings & Diagnosis

Patient Information Summary

Name: Jana Ahmed

Age: 77

Gender: Female

Date of Examination: [Insert Date]

Clinical Examination Findings

- Tooth #47 (FDI notation): The tooth presents with sensitivity to both cold and hot stimuli, indicating potential pulpitis or reversible pulpitis.

Diagnosis

- ICD-10: K02.9 (Dental pulp disorders, unspecified)

- SNOMED CT: 435678007 (Pulpitis)

Treatment Plan

- Root canal therapy for tooth #47 to alleviate sensitivity and prevent further progression of pulpitis.
- Restorative treatment for problem teeth (#12, 17, 24, 26, 27, 43, 45, 48) as necessary to address decay or fractures.
- Consider replacement options for missing teeth (#18, 25, 33, 35, 38, 44).

Urgency Level

High - Immediate attention required for tooth #47 due to sensitivity and potential pulpitis.

Medium - The remaining problem teeth require treatment to prevent further decay or complications.

Follow-up Recommendations

- Schedule a follow-up appointment to assess the progress of root canal therapy on tooth #47.

2. Arrange subsequent appointments for restorative and replacement treatments as needed.
3. Encourage regular oral hygiene practices, including brushing twice daily and flossing once daily, to maintain overall dental health.

Patient-Friendly Advice & Explanation

****Your Dental Check-up Results****

Hello Jana Ahmed,

I hope this message finds you well! Here's a summary of your recent dental check-up:

****What We Found:****

- Tooth #47 (the one at the top right of your mouth) is sensitive to both hot and cold. This could mean that there might be an issue with the inner part of the tooth, called pulpitis.
- Some other teeth (#12, 17, 24, 26, 27, 43, 45, 48) also have problems like decay or cracks that need attention.
- We also noticed that you are missing some teeth (#18, 25, 33, 35, 38, 44).

****What This Means:****

- The sensitivity in tooth #47 could be a sign of an inflammation in the inner part of the tooth, which is called pulpitis. If left untreated, it might cause more problems.
- The other problem teeth need treatment to prevent decay or cracks from getting worse.
- Missing teeth can affect your bite and make it harder to chew food properly.

****What We Recommend:****

1. We suggest a special procedure called root canal therapy for tooth #47 to help with the sensitivity and prevent further pulpitis.
2. We'll need to fix the other problem teeth (#12, 17, 24, 26, 27, 43, 45, 48) as necessary.
3. For missing teeth, we can discuss replacement options with you.

****What You Should Do At Home:****

- Keep up with good oral hygiene by brushing your teeth twice a day and flossing once a day to keep your whole mouth healthy.

****Follow-up Recommendations:****

1. We'll schedule a follow-up appointment to check on the root canal therapy for tooth #47.
2. We'll arrange additional appointments for any necessary restorative or replacement treatments.
3. Don't hesitate to reach out if you have any questions or concerns!

Stay well, Jana Ahmed! We look forward to seeing you soon.

DR. Signature
