

Patient Name:	hady	Doctor Name:	DR Yehia El-Amir
Age / Gender:	23y / Male	Specialization:	Dentist
Phone / Blood Type:	01***** (Blood: Unknown)	Consultation Time:	2026-06-16 04:03 PM

Consultation Parameters

Target Tooth ID:	16
Tooth Condition:	healthy
Reported Symptoms:	Hot Sensitivity, Jaw/TMJ Issues

Final Clinical Findings & Diagnosis

Patient Information Summary:

Name: hady
Age: 23
Gender: Male
Condition: Dental Consultation

Clinical Examination Findings:

Tooth #16 (FDI notation): Healthy

- No visible decay or fillings
- No signs of periodontal disease

Reported Symptoms:

- Hot sensitivity in tooth #16
- Jaw/TMJ issues

Diagnosis:

- Tooth Sensitivity (ICD-10: Z23.0): Sensitivity to hot liquids or cold air in tooth #16
- Temporomandibular Disorder (SNOMED CT: 73054009): Jaw/TMJ issues reported by the patient

Treatment Plan:

- Desensitization treatment for tooth #16 to alleviate hot sensitivity (e.g., fluoride varnish, desensitizing toothpaste)
- Referral to a TMJ specialist for further evaluation and management of jaw/TMJ issues
- Regular dental check-ups and professional cleanings every six months
- Consideration of a custom night guard if bruxism (teeth grinding) is suspected as a contributing factor to the TMJ issues

Urgency Level: Medium

Follow-up Recommendations:

- Schedule follow-up appointment in 2 weeks for reevaluation of tooth sensitivity and jaw/TMJ symptoms.

- If no improvement in symptoms, consider referral to an endodontist for further investigation of tooth #16.
- Continue with good oral hygiene practices at home (brushing twice daily, flossing once daily, and using mouthwash).

Patient-Friendly Advice & Explanation

****Your Visit Results:****

Hey Hady, here's a summary of your dental visit:

****What We Found:****

- Tooth #16 (the one on the bottom left): Looks healthy with no fillings or decay. However, it seems to be sensitive to hot liquids and cold air. You also mentioned some jaw/TMJ issues.

****What This Means:****

- Sensitivity in tooth #16: It might hurt when you eat or drink something hot or cold.
- TMJ Issues: You've been experiencing problems with your jaw, which could cause discomfort or pain.

****What We Recommend:****

1. To help with the sensitivity in tooth #16, we suggest using a fluoride varnish or desensitizing toothpaste.
2. Since you have TMJ issues, we'll refer you to a specialist for further evaluation and treatment.
3. Regular dental check-ups and cleanings every six months are important to keep your teeth and gums healthy.
4. If grinding your teeth (bruxism) might be contributing to your TMJ problems, we may recommend a custom night guard.

****What You Should Do At Home:****

1. Keep brushing your teeth twice a day, flossing once a day, and using mouthwash regularly.
2. In two weeks, come back for another check-up to see how you're doing with the tooth sensitivity and TMJ symptoms.
3. If your symptoms don't improve, we might need to refer you to an endodontist for more tests on tooth #16.

Stay patient and remember, we're here to help! Let's work together to keep your smile bright and healthy.

DR. Signature
